Fujitsu RunMyProcess Unlocks the Potential of Enterprise IoT Data

Posted on 28th March 2019

Fujitsu RunMyProcess is enabling enterprises to extract more value than ever before from data captured by their IoT devices through a new partnership with IoT.nxt.

The fusion of RunMyProcess and IoT.nxt technologies enables intuitive access for business users to the data lakes of IoT – with maximum adaptability to all types of enterprise processes. The portal and adapter technologies of IoT.nxt already cover one of the broadest possible portfolios of IoT devices to date.

The RunMyProcess/IoT.nxt integration will be showcased the first time at Hannover Messe Industrie, taking place from April 1-5, in **Hall 6, Booth B30** in the "**Bitkom Digital Factory**". Visitors can witness large amounts of manufacturing sensor data being captured by the IoT.nxt Raptor™ and sent to the cloud, converted into visual representations and dashboards, then shared seamlessly with a preventative maintenance application via RunMyProcess.
